## Size

26,300 ft<sup>2</sup>

## Owner

Village of Sauk City

## SAUK CITY PUBLIC WORKS 1115 Dallas St • Sauk City, WI

## Highlights

Sauk City Public Works was constructed as a pre-engineered metal building, which includes a garage, office and separate salt shed. The space was structurally designed so that it was large enough to store the city's sizable equipment. By using metal siding, we were able to keep costs low and create a unique, interesting look for the building.

Although we were challenged by a 44 day delay from the metal building supplier, we were still able to complete the project on time.

**BJ Galle** – Project Manager

"The public bid process is very cost-competitive. Our ability to maximize efficiency in all phases of construction allows us to be very competitive at these types of project."
